

## 2013 Ford Focus BEV Accelerated Testing - September 2014

Four model year 2013 Ford Focus battery electric vehicles (BEVs) entered Accelerated Testing - one during December 2013 and the other three during January 2014 in a fleet in Arizona. Each Focus will be operated for 60,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby [www](#) pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four 2013 Ford Focus BEVs have been driven a total of 22,322 miles. The cumulative average electricity consumption is 378.6 AC Wh/mile. Monthly electricity consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site.
